

# ASSESSING THE RELATION BETWEEN COASTAL FLOOD RISK AND RISK PERCEPTION IN SEJERØ BAY

# INTRODUCTION

- Aim: investigate whether experts' risk calculations match local risk perception
- Summerhouse area around Sejerø
- Climate change's effects
- Main parts: **1. Expert judgement**  
**2. Local risk perception**

# METHOD: EXPERT JUDGEMENT

Based on Kellens et al. 2013

# RESULTS: EXPERT JUDGEMENT

| Scenario       | Total expected annual damage (million euro) |
|----------------|---------------------------------------------|
| 2010           | 0.49                                        |
| 2050 – RCP 4.5 | 1.42                                        |
| 2050 – RCP 8.5 | 1.96                                        |
| 2100 – RCP 4.5 | 2.54                                        |
| 2100 – RCP 8.5 | 4.78                                        |

# RESULTS: EXPERT JUDGEMENT

# FRAMEWORK: RISK PERCEPTION

van der Linden (2012)

# METHOD: SURVEY

- Questionnaire → local risk perception
- ~ interview
- 4 main parts: 1. Background variables  
2. Risk perception  
3. Willingness to pay  
4. Qualitative analysis

**ADAPTING TO SEA-LEVEL RISE(S) IN SEJERØ BAY**

One of climate change's most impactful effect is the global rise in sea level, making coastal areas extra vulnerable. To investigate these effects, the universities of Ghent and Copenhagen started a collaboration. A damage map of Sejerø Bugt was made. In order to evaluate the risk perception and willingness to act of residents in Sejerø Bugt, this questionnaire was made. All information is handled anonymously. The investigation is part of an assignment for the course 'International Projectwork' and will only be used internally by these universities.

1. Are you owner of the property or tenant?

|                       |                       |
|-----------------------|-----------------------|
| Owner                 | Tenant                |
| <input type="radio"/> | <input type="radio"/> |

2. Residing permanently?

|                       |                       |
|-----------------------|-----------------------|
| Yes                   | No                    |
| <input type="radio"/> | <input type="radio"/> |

3. Presence of children at the property?

|                       |                       |
|-----------------------|-----------------------|
| Yes                   | No                    |
| <input type="radio"/> | <input type="radio"/> |

4. Do you have a direct personal experience with past storm surges and floods?

|                       |                       |
|-----------------------|-----------------------|
| Yes                   | No                    |
| <input type="radio"/> | <input type="radio"/> |

5. Do you have a cellar?

|                       |                       |
|-----------------------|-----------------------|
| Yes                   | No                    |
| <input type="radio"/> | <input type="radio"/> |

6. Does the property have more than a ground floor (excluding cellar)?

|                                |                          |
|--------------------------------|--------------------------|
| Yes (more than a ground floor) | No (just a ground floor) |
| <input type="radio"/>          | <input type="radio"/>    |

7. Is this residence elevated (floor to ground)?

|                       |                       |
|-----------------------|-----------------------|
| Yes (> 10 cm)         | No (0 - 10 cm)        |
| <input type="radio"/> | <input type="radio"/> |

8. I am worried about the danger of a storm surge in the Sejerø Bugt

|                       |                       |                            |                       |                       |
|-----------------------|-----------------------|----------------------------|-----------------------|-----------------------|
| Strongly disagree     | Disagree              | Neither agree nor disagree | Agree                 | Strongly agree        |
| <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |

9. A storm surge can have fatal consequences for the coastal area and its inhabitants

|                       |                       |                            |                       |                       |
|-----------------------|-----------------------|----------------------------|-----------------------|-----------------------|
| Strongly disagree     | Disagree              | Neither agree nor disagree | Agree                 | Strongly agree        |
| <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |

10. I experience staying at Sejerø Bugt as a threat to my safety

|                       |                       |                            |                       |                       |
|-----------------------|-----------------------|----------------------------|-----------------------|-----------------------|
| Strongly disagree     | Disagree              | Neither agree nor disagree | Agree                 | Strongly agree        |
| <input type="radio"/> | <input type="radio"/> | <input type="radio"/>      | <input type="radio"/> | <input type="radio"/> |

11. I expect great chances of storm surges causing floods in the coastal area

Based on Kellens et al. (2011)

# METHOD: SURVEY

- N = 82
- Age normally distributed
- More men than women
- Evenly distributed between high and low risk area

| Variable         | Number | Percentage | Variable                    | Number | Percentage |
|------------------|--------|------------|-----------------------------|--------|------------|
| <b>Age</b>       |        |            | <b>Education level</b>      |        |            |
| 16 - 30          | 3      | 3.7        | High                        | 70     | 85.4       |
| 31 - 45          | 19     | 23.2       | Low                         | 12     | 14.6       |
| 46 - 60          | 32     | 39.0       | Missing                     | 0      | 0.0        |
| 61 - 75          | 24     | 29.3       |                             |        |            |
| 76 - 90          | 4      | 4.9        | <b>Home ownership</b>       |        |            |
| Missing          | 0      | 0.0        | Owner                       | 68     | 82.9       |
|                  |        |            | Tenant                      | 14     | 17.1       |
| <b>Gender</b>    |        |            | Missing                     | 0      | 0.0        |
| Male             | 48     | 58.5       |                             |        |            |
| Female           | 34     | 41.5       | <b>Permanent residence</b>  |        |            |
| Missing          | 0      | 0.0        | Yes                         | 9      | 11.0       |
|                  |        |            | No                          | 73     | 89.0       |
| <b>Cellar</b>    |        |            | Missing                     | 0      | 0.0        |
| Yes              | 3      | 3.7        |                             |        |            |
| No               | 79     | 96.3       | <b>Flood experience</b>     |        |            |
| Missing          | 0      | 0.0        | Yes                         | 24     | 29.3       |
|                  |        |            | No                          | 58     | 70.7       |
| <b>Elevated</b>  |        |            | Missing                     | 0      | 0.0        |
| Yes (> 10cm)     | 52     | 63.4       |                             |        |            |
| No               | 29     | 35.4       | <b>Ground floor</b>         |        |            |
| Missing          | 1      | 1.2        | Yes                         | 62     | 75.6       |
|                  |        |            | No                          | 19     | 23.2       |
| <b>Risk area</b> |        |            | Missing                     | 1      | 1.2        |
| High             | 42     | 51.2       |                             |        |            |
| Low              | 40     | 48.8       | <b>Presence of children</b> |        |            |
| Missing          | 0      | 0.0        | Yes                         | 65     | 79.3       |
|                  |        |            | No                          | 17     | 20.7       |
|                  |        |            | Missing                     | 0      | 0.0        |

# METHOD: RISK PERCEPTION

| Question                                                                                     | Dread (personal, emotional)                                   | Knowledge (awareness in general)                                | Focus of the question          |
|----------------------------------------------------------------------------------------------|---------------------------------------------------------------|-----------------------------------------------------------------|--------------------------------|
| <b>8. I am worried about the danger of a storm surge in the Sejerø Bugt</b>                  | Local dread: 'in Sejerø Bugt'                                 | Awareness, thought about the danger: 'worried about the danger' | <b>Dread and knowledge</b>     |
| <b>9. A storm surge can have fatal consequences for the coastal area and its inhabitants</b> | Personal location: 'for the coastal area and its inhabitants' | Awareness, knowing consequences: 'can have fatal consequences'  | <b>Dread and knowledge</b>     |
| <b>10. I experience staying at Sejerø Bugt as a threat to my safety</b>                      | Personal: 'threat to my safety'                               | Question implies knowledge about the negative consequences      | Mostly <b>Dread</b>            |
| <b>11. I expect great chances of storm surges causing floods in the coastal area</b>         | Local: 'in the coastal area'                                  | Awareness, risk estimation: 'expect great chances'              | Slightly more <b>knowledge</b> |
| <b>12. When I think of floods, I feel concerned</b>                                          | Personal emotions: 'I feel'                                   | General knowledge: 'concerned'                                  | Mostly <b>knowledge</b>        |

Based on Kellens et al. 2011

# METHOD: FACTOR AND REGRESSION ANALYSES

## Factor analysis

- Principal axis factoring → exploratory technique
- Cronbach's alpha: 0,597

## Regression analyses

- H1: living in high risk area → higher levels of perceived risk
- H2: higher age, female gender, lower education, home ownership and permanent residence → higher levels of perceived risk
- H3: previous flood experience → higher levels of perceived risk

Based on Kellens et al., 2011

# RESULTS & DISCUSSION: FACTOR ANALYSIS

Risk perception:

|                       | Factor |      |                           |
|-----------------------|--------|------|---------------------------|
|                       | 1      | 2    |                           |
| 8. worried            | .454   | .610 | → Dread and knowledge     |
| 9. fatal_consequences | .943   |      | → Dread and knowledge     |
| 10. threat            |        |      | → Mostly dread            |
| 11. expect_changes    |        | .488 | → Slightly more knowledge |
| 12. concerned         |        | .441 | → Mostly knowledge        |

Extraction Method: Principal Axis Factoring.  
Rotation Method: Varimax with Kaiser Normalization  
Rotation converged in 3 iterations.  
Coefficients below 0.4 are suppressed.

# RESULTS & DISCUSSION: APPREHENSION

- Risk perception < **apprehension** & awareness

|       |            | Unstandardized Coefficients |            | Standardized Coefficients |        |      |
|-------|------------|-----------------------------|------------|---------------------------|--------|------|
| Model |            | B                           | Std. Error | Beta                      | t      | Sig. |
| 1     | (Constant) | .529                        | .279       |                           | 1.897  | .062 |
|       | Risk area  | -.522                       | .200       | -.278                     | -2.615 | .011 |
|       | Gender     | .332                        | .203       | .174                      | 1.634  | .106 |
|       | Ownership  | -.549                       | .264       | -.220                     | -2.079 | .041 |

$$R^2 = 0,132$$

$$R^{2'} = 0,099$$

# RESULTS & DISCUSSION: APPREHENSION

- H1: living in high risk area → ~~higher levels of perceived risk~~  
→ **lower** levels of perceived risk
- “Optimism bias”: the erroneous belief that others are more likely to be affected by the same risk (Weinstein, 1989)

|       |            | Unstandardized Coefficients |            | Standardized Coefficients |        |      |
|-------|------------|-----------------------------|------------|---------------------------|--------|------|
| Model |            | B                           | Std. Error | Beta                      | t      | Sig. |
| 1     | (Constant) | .529                        | .279       |                           | 1.897  | .062 |
|       | Risk area  | -.522                       | .200       | -.278                     | -2.615 | .011 |
|       | Gender     | .332                        | .203       | .174                      | 1.634  | .106 |
|       | Ownership  | -.549                       | .264       | -.220                     | -2.079 | .041 |

# RESULTS & DISCUSSION: APPREHENSION

- H2: ~~higher age,~~ **female gender,** ~~→ higher levels of perceived risk~~  
home ownership, ~~permanent~~ **→ lower levels of perceived risk**  
~~residence & high education~~
- Interpretation: men are more likely to be confronted with the risk associated with the responsibility of protecting the summer house in case of an emergency

|       |            | Unstandardized Coefficients |            | Standardized Coefficients |        |      |
|-------|------------|-----------------------------|------------|---------------------------|--------|------|
| Model |            | B                           | Std. Error | Beta                      | t      | Sig. |
| 1     | (Constant) | .529                        | .279       |                           | 1.897  | .062 |
|       | Risk area  | -.522                       | .200       | -.278                     | -2.615 | .011 |
|       | Gender     | .332                        | .203       | .174                      | 1.634  | .106 |
|       | Ownership  | -.549                       | .264       | -.220                     | -2.079 | .041 |

# RESULTS & DISCUSSION: APPREHENSION

- Combining the findings of H1 and H2: difference in risk perception among areas is slightly more pronounced for men

# RESULTS & DISCUSSION: APPREHENSION

- H2: ~~higher age, female gender,~~  
**home ownership,** ~~permanent~~  
~~residence & high education~~ → ~~higher levels of perceived risk~~  
→ **lower levels of perceived risk**

|       |            | Unstandardized Coefficients |            | Standardized Coefficients |        |      |
|-------|------------|-----------------------------|------------|---------------------------|--------|------|
| Model |            | B                           | Std. Error | Beta                      | t      | Sig. |
| 1     | (Constant) | .529                        | .279       |                           | 1.897  | .062 |
|       | Risk area  | -.522                       | .200       | -.278                     | -2.615 | .011 |

# RESULTS & DISCUSSION: APPREHENSION

- Combining the findings of H1 and H2: difference in risk perception among areas is less pronounced for tenants
- Interpretation: since renting is temporary, risk perception doesn't influence their rental location as much

# RESULTS & DISCUSSION: APPREHENSION

- Combining the findings of H1 and H2: people with similar apprehension regarding risk would rent in a high risk area, but buy property in a low risk area

# RESULTS & DISCUSSION: AWARENESS

- Risk perception < apprehension & **awareness**
- H3: previous flood experience → higher levels of perceived risk
- “Availability heuristic”: people who have previously experienced an important event can recall it more readily and are more aware of the magnitude of the consequences of that event (Tversky & Kahneman, 1974)

| Model |                  | Unstandardized Coefficients |            | Standardized Coefficients | t      | Sig. |
|-------|------------------|-----------------------------|------------|---------------------------|--------|------|
|       |                  | B                           | Std. Error | Beta                      |        |      |
| 1     | (Constant)       | -.116                       | .099       |                           | -1.168 | .246 |
|       | Flood experience | .396                        | .184       | .235                      | 2.160  | .034 |

$R^2 = 0,055$

$R^{2'} = 0,043$

# RESULTS & DISCUSSION: ADAPTATION MEASURES

- Larger >> Smaller adaptations
- Local ecosystem & accessibility beach → important

⇒ Soft structural solutions (e.g. wetlands)

- 13 people already take measures themselves
  - 11 live in high risk area
  - Also to protect against rainfall

# RESULTS & DISCUSSION: LIMITATIONS

- Question 15 → Too complex

“I am prepared to pay for larger adaptation structures against flooding in the municipality, even if not every citizen is willing to”

- Question 19 → Overlap with 13 & 14

“I prefer to pay for flooding adaptation on my own rather than paying extra taxes to the municipality to protect the community against flooding?”

- The answers of questions 8-13 & 15-18 → Subjective

Strongly disagree

0

Disagree

0

Neither agree nor disagree

0

Agree

0

Strongly agree

0

- High resolution of flood maps → Unnecessary

# CONCLUSION

- Flood risk increases every year
- Low risk → High apprehension (and vice versa)
- Men → better apprehension

⇒ Influence peoples emotional and personal components to change their behaviour

- Other risks for future research (e.g. heavy rain)  
→ This methodology could be usefull!
